WHAT FIELDOPS DOES

One workspace.

A defensible chain of work.

FieldOps turns approved scope into controlled execution, durable evidence and review-ready deliverables without sending engagement records to a required cloud account.

01 // PERMITS**SIGNED SCOPE**

Exact hosts, ports, policy and testing window bound to a device-held Ed25519 operator identity.

02 // OBSERVE**FOCUSED DIAGNOSTICS**

DNS, TCP, HTTP posture, TLS identity, service profiles, surface baselines and bounded web maps.

03 // VALIDATE**ASSESSMENT CAMPAIGNS**

Repeatable multi-target service inventory, change verification and complete assessment profiles.

04 // PROVE**EVIDENCE VAULT**

SHA-256 sealed captures retain target, timing, raw result, resolved addresses and execution context.

05 // REMEDIATE**FINDINGS + RETESTS**

Promote evidence into reviewed findings, track disposition and attach a later capture as formal retest proof.

06 // STRESS**CHAOS ENGINE**

Short, bounded HTTP resilience profiles with live telemetry, SLO aborts, emergency stop and recovery validation.

PROFESSIONAL OUTPUTS

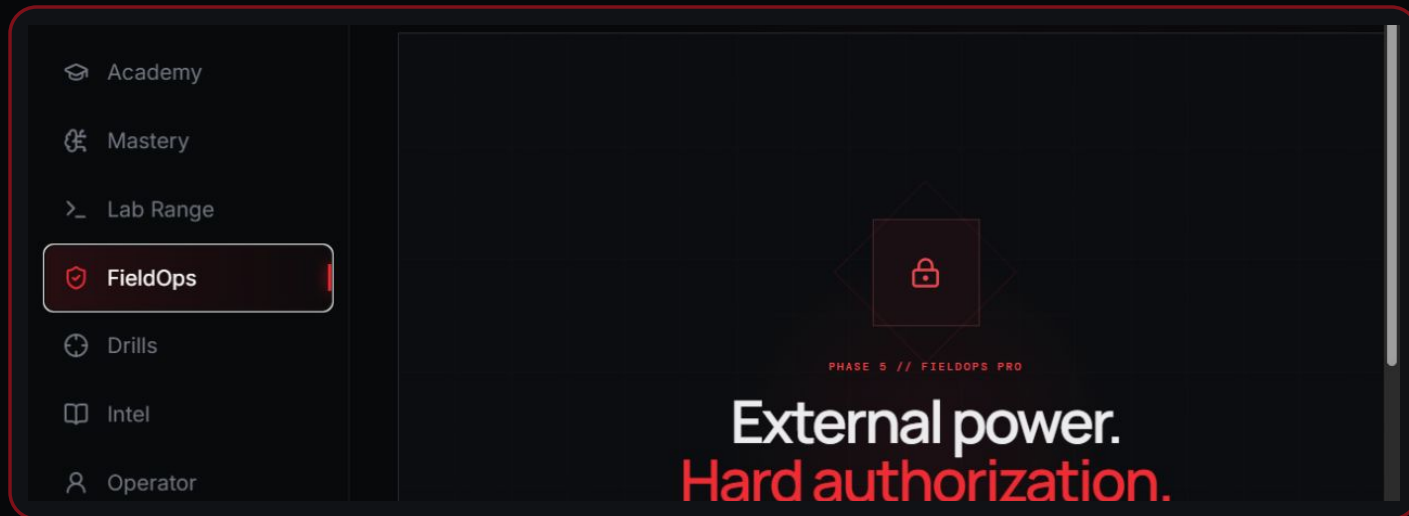

Machine-readable JSON case file

Printable client report

Integrity + attribution verdicts

FROM AUTHORIZATION TO REPORT

Built for work that has to survive review.

1

DEFINE

Translate written authorization into exact targets, ports, policy and dates.

2

SIGN

Bind the permit to the named operator, approver and device-held key.

3

OPERATE

Run diagnostics or campaigns only inside the active signed boundary.

4

PROVE

Seal captures, review findings, retest and export the complete record.

FIELDOPS PRO**\$29.99**

ONE-TIME LICENSE

Academy stays free. FieldOps is the paid workspace.

SCAN TO UNLOCK`academy.daemoncore.app`

License unlocks the software. Written authorization is still required for every target.
